

# Wholesale price for fuel ethanol

1 September 2025

## 1 Determination

IPART has determined that a reasonable wholesale price for fuel ethanol starting from 1 September 2025 is 156.9 cents per litre (excluding GST). This is up from 156.5 cents in March 2025 (Figure 1).

Figure 1 Determined wholesale fuel prices for fuel ethanol (ex GST, \$nominal)

Note: Between 2020 and 2022 IPART determined the wholesale price annually. Due to significant price volatility following COVID, we made quarterly determinations over 2023. In September 2023, we decided to do 6-monthly updates as the ethanol price had stabilised. For more information on how often we set prices, please see our [September 2023 determination](#).

## 2 Commencement and term

This determination commences on 1 September 2025. It remains in effect until it is revoked or replaced.

## 3 Replacement of the previous determination

This determination revokes and replaces *Determination – Wholesale price for fuel ethanol – 1 March 2025*.<sup>a</sup>

<sup>a</sup> IPART, *Determination – Wholesale price for fuel ethanol – 1 March 2025*, 1 March 2025

## 4 Changes in the determined wholesale price

The wholesale price is determined based on a 9-month average (up until one month prior to the commencement of the pricing period) of weekly import parity price estimates, using the lowest cost origin for ethanol for each week from either the US or Brazil.<sup>b</sup> The price model is available on our [website](#).

The September 2025 determined price of 156.9 cents per litre is 0.4 cents or 0.3% higher than the previous period. The rise in the price in September is primarily attributed to higher fuel excise rates and increased origin country freight costs. The origin country freight cost was higher as local transport in the US tends to be more costly, and the fuel excise rates are indexed based on the upward movement of the consumer price index (CPI). The increases were largely offset by a reduction in the international sea freight costs from the US (see Table 1 and Figure 2).

Table 1 Determined wholesale price for fuel ethanol from 1 September 2025 (AUD cents per litre, ex GST, \$nominal)

Cost component	1 Mar 2025	1 Sep 2025	Change	% of the index <sup>a</sup>
<b>Total free on board (FOB) price</b>	<b>81.5</b>	<b>83.0</b>	<b>1.5</b>	<b>53%</b>
Mill-gate price	66.3	66.2	-0.1	42%
Origin country freight	10.8	12.2	1.4	8%
Origin country port costs	4.4	4.7	0.3	3%
<b>Total transit costs</b>	<b>23.7</b>	<b>22.3</b>	<b>-1.5</b>	<b>14%</b>
Sea freight	18.6	17.1	-1.5	11%
Insurance costs	0.4	0.4	0.0	0%
Wharfage import terminal	0.2	0.3	0.01	0%
Storage and handling import terminal	3.0	3.0	0.0	2%
Transport to fuel wholesale terminal	1.5	1.5	0.0	1%
<b>Total landing costs (taxes)</b>	<b>51.2</b>	<b>51.6</b>	<b>0.4</b>	<b>33%</b>
Customs value duty	0.4	0.0	-0.4	0%
Average fuel excise	50.8	51.6	0.8	33%
<b>Total import parity price delivered to wholesale terminal (ex GST)</b>	<b>156.5</b>	<b>156.9</b>	<b>0.4</b>	<b>100%</b>

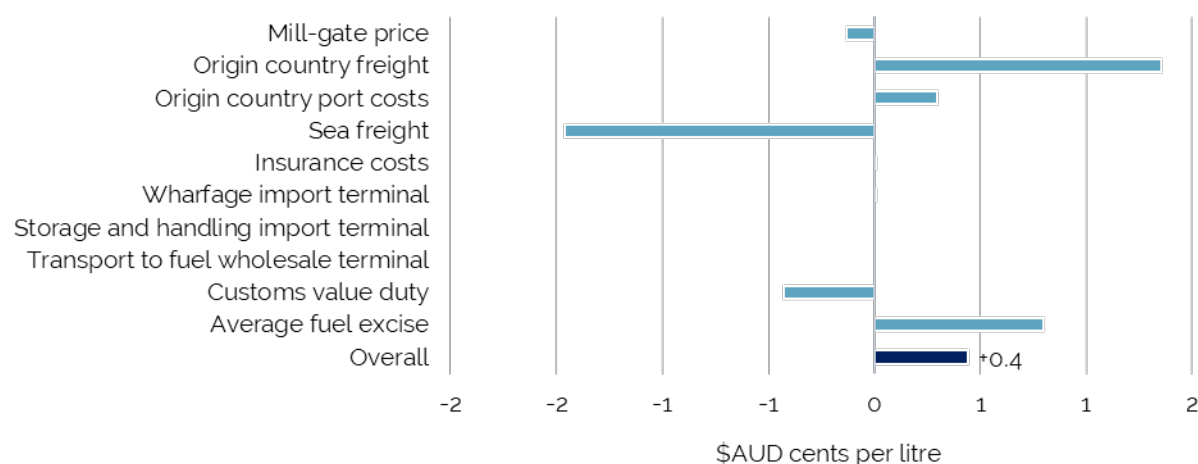

a. As at 1 September 2025.

b. Numbers may not add to totals due to rounding.

## 5 Why we set the wholesale price for ethanol

Under the [NSW Biofuels Act 2007](#) (Biofuels Act), fuel sellers must ensure that 6% of fuel sold is ethanol. This means that 60% of fuel sales are required to be E10 (which is made up of 10% ethanol, and 90% unleaded fuel).

Fuel sellers can be exempt from this requirement on various grounds. Since 2017, one of the grounds of exemption is that the wholesale price of fuel ethanol paid by retailers exceeds [the reasonable wholesale price determined by IPART](#).

## 6 How we set prices

Our approach to determining a reasonable wholesale price depends on the level of competition in retail and wholesale markets. Where there is effective competition in one or both of these markets, customers will be protected from excessive prices.

In the NSW retail market, around 28% of the fuel sales were E10 in 2025.<sup>1</sup> E10 competes with regular unleaded petrol ("U91") and premium fuels. This limits the price that suppliers can charge for ethanol. If the wholesale price of ethanol is too high, the retail price of E10 would rise and customers would switch to other fuels.

We set wholesale prices based on an estimate of the market price of importing ethanol (the "import parity price" or "IPP"). This approach reduces the risk of the determined wholesale price being set too low, which could impact the financial viability of ethanol suppliers and discourage new entry.

We adopted this approach in 2016 while taking into account the matters in the Biofuels Act, and extensive consultation with stakeholders. Since then, we have periodically reviewed our approach and sought stakeholder feedback.

Further information on our methodology and why we consider this is the most appropriate approach is available on our [website](#).
