

WHAT

Flow Systems Operations was granted a network operator’s licence (Licence Number 17_042) on 13 October 2017 to construct, operate and maintain drinking water, non-potable water and sewerage infrastructure for a development at Shepherds Bay.

On 1 November 2017, the Minister approved the commencement of commercial operation of the drinking water and sewerage reticulation networks.

WHERE

The development is located at Meadowbank in the City of Ryde Council local government area.

HOW

We assess each application against the criteria outlined in section 10(4) of the *Water Industry Competition Act 2006* (WIC Act) to determine if the Minister should grant a licence for the activities that a licence, if granted, would authorise.

To obtain the Minister’s approval for commercial operation, the licensee must provide the Minister with a report, prepared by an approved Auditor. The report must indicate that:

- ▼ the infrastructure complies with legislative and licence requirements, and

- ▼ is capable of operating safely and in accordance with its licence plans.

WHAT NEXT

The Licensee must obtain the Minister’s approval each time that new infrastructure is ready for commercial operation. New infrastructure excludes infrastructure that is substantially the same as approved infrastructure.

[Find a WIC Act licence](#) in your area.
