

# Solar feed-in tariff offers available in NSW – April 2022

10 June 2022

IPART tracks the solar feed-in tariffs offered by different retailers. In April 2022, around 40 retailers in NSW were offering solar feed-in tariffs. Most were offering tariffs above IPART's solar feed-in tariff benchmark range (Figure 1).

Figure 1 Solar feed-in tariffs available in NSW – April 2022

The offer with the highest feed-in tariff may not be the best deal overall, as it could be paired with higher retail prices.

Customers should consider all aspects of a retailer's offer including usage and fixed charges. You can shop around for the best deal using the Australian Government's website [Energy Made Easy](https://www.energy.gov.au).

Note: Some offers with high feed-in tariffs are for a limited quantity of exports each period and falls to a lower feed-in tariff after. Social Energy offers 40c/kWh for up to 300kWh every quarter, then around 9 c/kWh after. Amber Electric offers real-time solar feed-in tariff prices to its customers
