EXECUTIVE SUMMARY

This Development Servicing Plan (Draft DSP) sets out the price for connecting a new development to **Morpeth Wastewater DSP**

The prices have been prepared using the method set by the Independent Pricing and Regulatory Tribunal's (IPART) in their 2018 Determination (IPART 2018 Determination)

Using the methodology in the 2018 Determination, the maximum price for **Morpeth Wastewater DSP** is **\$3,696.79** (\$2022-23) per Equivalent Tenement (ET). One ET represents the average billing of a single standalone residential dwelling. The charge will be adjusted each year based on movements in the Consumer Price Index (CPI).

Each DSP contains information about the geographical area covered by the system, estimates of future capital expenditure and operating costs, demographic assumptions, and documents the planning information relevant to that system.

The NSW Government has directed that developer charges will remain at 0% (\$0) for financial year 2023-24, before a phased reintroduction at 25% in financial year 2024-25, 50% in financial year 2025-26, prior to full reintroduction from financial year 2026-27 onwards.

GLOSSARY

ABS Australian Bureau of Statistics

Annual Demand Estimated total annual water consumption

CPI Consumer Price Index (All Groups) index for the weighted average of

eight capital cities as published by the ABS

Developer Any person(s) who intends to subdivide land and/or undertake works

that may place demand on water and/or sewer systems

DSP Development Servicing Plan

ET Equivalent demand or loading from a standard household.

(Equivalent Tenement)

Headworks – Water Infrastructure comprising a system of dams, major storage

reservoirs, Water Treatment Plant (WTP) and bulk water supply

IPART Independent Pricing & Regulatory Tribunal

KL/d Kilolitres per day

Lead-in A main that passes through lands other than the subject land which

may be subdivided and/or developed

MEERA Modern Equivalent Engineering Replacement Asset – means an

asset value calculated on the basis that the asset is constructed at the time of valuation in accordance with modern engineering practice and the most economically viable technologies, which provides

similar utility functions to the existing asset in service.

ML/d Megalitres per day

NPV Net Present Value: the summation of future expenditures / incomes

expressed in today's dollars taking account the impact of financing

costs due to interest rates

Reticulation Local supply pipes providing water and sewer services to individual

properties

Rising Main A pipeline that is pressurized to transport sewage to a higher level

System The integration of infrastructure assets into a network to service an

area or catchment

WPS Water Pumping Station

WTP Water Treatment Plant

WWPS Wastewater Pumping Station

WWTW Waste Water Treatment Works

DEVELOPER CHARGES AND EQUIVALENT TENAMENTS

Calculation of the Developer Charge

What methodology is used to determine the value of developer charges?

IPART's 2018 Determination of developer charges sets the methodology that Hunter Water must follow when calculating a maximum price (charge) for each Developer Servicing Plan (DSP) area. (see IPART 2018 Determination).

The developer charge is calculated on a per Equivalent Tenement (ET) basis. One ET is equal to the estimated demand of a typical residential standalone dwelling. Each DSP area includes a developer charge for water and wastewater separately.

The methodology comprises two main components:

The Capital Charge

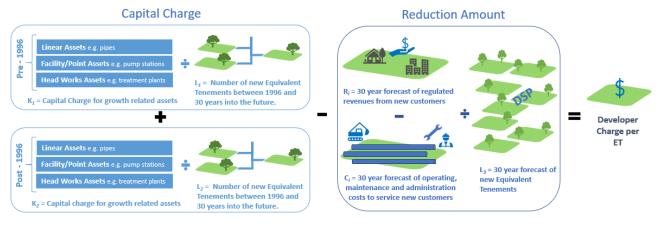

The present value of the capital cost of assets used to service growth in the DSP area. This relates to both existing and future assets.

• The Reduction Amount

The present value of future periodic revenues less location-specific operating costs related to new customers. This is forecast over a 30-year period.

The calculation is summarised in the below *Figure 1*.

In Each DSP Area:

Note:

K₁, K₂, R_i, C_i, L₁, L₂ and L₃ represent each component of IPARTs formula on pages 5 and 6 of the 2018 Determination. Pre-1996 assets are those commissioned between 1 January 1970 and 31 December 1995. Post-1996 assets include those commissioned after 1 January 1996, plus a forecast of future uncommissioned assets.

The total charge payable by any given development depends on the assessed number of ETs in that development. The underlying net present value method ensures that, all else being equal, the price paid by each new connection will be the same regardless of when the connection occurs.

DEVELOPMENT SERVICING PLAN (DSP): SUMMARY

Plan name and Purpose

This plan is called the "Morpeth Wastewater Treatment Work Catchment Development Servicing Plan" (S.15)

The purpose of this plan is to identify the demand for facilities and services as a result of development, and to provide those services and facilities (or equivalent) through developer contributions. The services and facilities included in this plan are only those provided through Hunter Water Corporation and not those provided by other authorities.

Summary of Contents

This DSP details the developer charges within the Morpeth Wastewater Treatment Work (WWTW) catchment. The service area is shown in Figure 2. Morpeth DSP covers approx. 97.27 square km. This DSP supersedes all prior determinations.

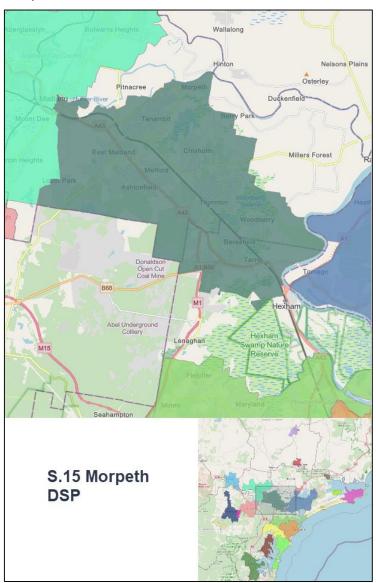

Figure 2 - Morpeth Wastewater Treatment Work (WWTW) DSP

Area Covered

The suburbs (or part suburbs) within this DSP are: Ashtonfield; Beresfield; Berry Park; Black Hill; Chisholm; East Maitland; Four Mile Creek; Hinton; Horseshoe Bend; Metford; Morpeth; Phoenix Park; Pitnacree; part of Buchanan; part of Hexham; part of Lorn; part of Louth Park; part of Maitland; part of Millers Forest; part of South Maitland; part of Tarro; part of Woodberry; Raworth; Tenambit; Thornton

Relationship to other plans

Each site will have two developer charges applicable – one for water and another for wastewater. Developers will need to refer to Hunter Water's website to identify which DSPs are applicable to their development.

Determination of DSP area

How has the DSP area been determined?

The DSP area for Morpeth WWTW Catchment was determined based on the areas serviced by the Morpeth WWTW.

This is in accordance with Hunter Water's criteria for defining system catchment boundaries. Below details the formal guidelines used to define the extent of system catchment/supply zones for use in Development Servicing Plans (DSPs) and developer charge calculations.

Determining Wastewater DSP Criteria

Wastewater Transportation and Treatment

The system catchment boundary for wastewater treatment and transportation assets delineates the area served by the treatment works. This area is strongly based on topography/geography as the most efficient means of providing the wastewater treatment service.

Appendix A shows the assets included in the DSP area.

DEVELOPMENT SERVICING PLAN (DSP): PLANNING PROFILE

Boundary and Location

The Morpeth Wastewater Treatment Works services the townships of Beresfield and Woodberry in the south, Morpeth in the north and Maitland/East Maitland in the west. The Morpeth Wastewater Treatment Works is entirely within the Maitland City Council Local Government Area (LGA).

Current Population and Equivalent Tenement

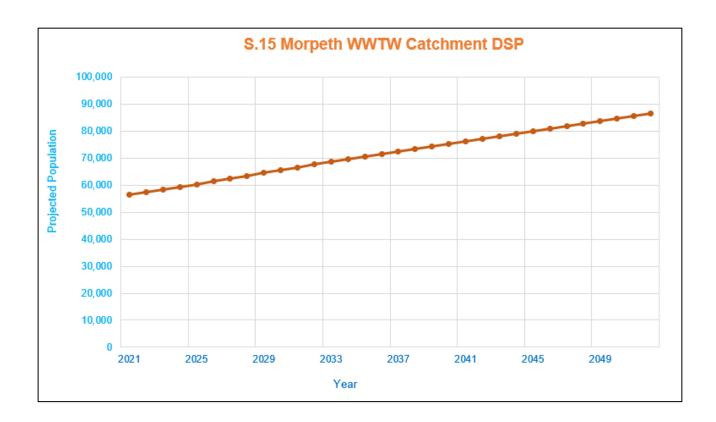

The total permanent population of the area in 2023 is estimated at: 58,269 which represents 9.2% of the total population of Hunter Water's servicing area.

An Equivalent Tenement (ET) is the unit of measure used to quantify the demand or loading on water or wastewater systems respectively. One ET represents the average billing of a single standalone residential dwelling.

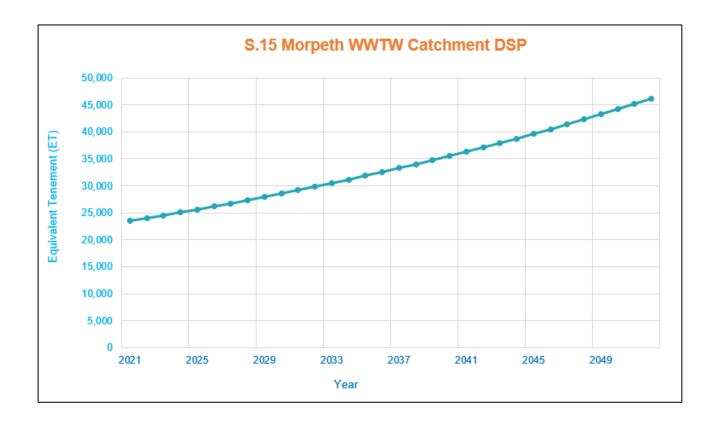

There are approximately 24,508 ETs in 2023 connected to the Morpeth wastewater system.

Projected Population and Equivalent Tenement

The projected total permanent population in the Morpeth WWTW DSP in 2052 is 86,449 (9.6% of the total population of Hunter Water's servicing area).

The projected Equivalent Tenements (ET) in the Morpeth WWTW DSP in 2052 is 46,144 ETs.

Standards of Service

The standards of service to be provided to customers in the DSP Area are as per the following Licence, Standards and Charters:-

- Hunter Water Corporation Operating Licence
- Hunter Water Corporation Customer Contract

System design and operation is based on providing standards of service relative to:-

Wastewater

- Hunter Water is required to produce effluent that meets the requirements of our Environment Protection Licences which are governed by the Environment Protection Authority, as well as meet recycled water guidelines/agreements where recycled water is in use.
- Hunter Water integrated editions of the Water Services Associated of Australia (WSAA) design and construction guidelines (WSA 02 - Gravity Sewerage Code of Australia)
- Sewage Pump Stations and Rising Mains Design Manual (<u>link</u>)

DEVELOPMENT SERVICING PLAN (DSP): ASSET PROFILE

Assets included in the DSP Charge

In accordance with the 2018 Determination, the developer charge calculation includes all water and wastewater assets that Hunter Water has funded or will fund to provide services to new development.

'Assets' means all assets or parts of assets (including headworks), apart from 'Excluded Assets', allocated to a DSP where there is a nexus (close connection) to the Development they are intended to serve and includes assets that:

- a) were commissioned prior to the Commencement Date;
- b) were commissioned after the Commencement Date but before the Development commenced; and
- c) are commissioned, or are to be commissioned, after the Development commences.

'Excluded Assets' means and assets:

- d) that part of an asset provided for a reason other than to service a growth area;
- e) that part of an asset that services other DSP Areas;
- f) the capacity of an asset that was made available by changes in land use patterns, or by changes in average demand;
- g) any asset or part of an asset that was unreasonably oversized relative to system and capacity requirements, based on available demographic data at the time it was commissioned;
- h) any Pre-1970 Assets; and
- i) any asset or part of an asset funded by Developers and transferred free of charge to the Agency.

The timing of existing assets contributing to the DSP has been sourced from Hunter Water's Fixed Assets Register. Proposed future assets have been sourced from Servicing Strategy Reports and reconciled with Hunter Water's Capital Works Program.

Summary of Completed Works in the DSP

Table 1 provides a summary of the completed Hunter Water funded works within the Morpeth WWTW DSP. Hunter Water's financial, developer and geographic information systems were used to identify works that have been constructed to provide a benefit to future development. Additional details of the items including the historical costs and the actual date of works are shown in Appendix A.

DSP Name	Asset Type	Total MEERA (\$2020-21)*
S.15 Morpeth	Completed Gravity Mains	\$ 28,391,109.13
	Completed Rising Mains	\$ 24,655,541.94
	Completed Point Assets	\$ 83,603,011.13
	TOTAL	\$ 136,649,662.19

^{*}Note: only the percentage attributable to growth has been added to the developer charge model.

Proposed Future Assets

The 2018 Determination allows Hunter Water to recover the cost of assets that are yet to be constructed and which are identified as being necessary to service future development. HWC's Capital Works Program database and Funding of Growth portfolio was referenced to identify the Future Works for each DSP area. Additional details of the items including the historical costs and the actual date of works are shown in Appendix A.

Hunter Water reserves the right to alter the scope and timing of the proposed future works, which are subject to ongoing review. Altered growth patterns and development profiles, changes to land-use zoning and other market conditions influence the location of development, and as a result Hunter Water may alter the proposed schedule of works in order to provide an optimal and cost-efficient service. All developers are advised to contact Hunter Water to determine the nearest point of service connection.

Connecting Asset Funding (formerly Funding of Growth Infrastructure) – Completed Assets

Since the introduction of the Funding of Growth Infrastructure Standard in 2018 Hunter Water has entered commercial agreements with developers to deliver a range of water and sewer infrastructure supporting growth.

The value of the completed assets under the Standard have been included in the developer charge calculation using the GIS spatial model and accordingly their value will be recovered within the relevant DSP area they serve.

Connecting Asset Funding (formerly Funding of Growth Infrastructure) – Future Assets

A number of portfolio allowances have been made in anticipation of investments Hunter Water may need to make to support developer delivered connecting infrastructure under the Connecting Asset Funding (formerly Funding of Growth Infrastructure) Standard.

Hunter Water has reviewed the known approved water and wastewater servicing strategies prepared by developers and assessed whether some of the resulting assets may qualify under the Standard to be funded by Hunter Water and delivered by the development community. Such assets are included in the developer charge model with the associated lots served.

Where Hunter Water has received a Preliminary Servicing Application and has forward visibility of a likely development requiring support for connecting infrastructure, an allowance has been made in the forward program to allow such assets to be considered for developer design and construction within a 10-year window from 1 July 2023.

It is anticipated that each 5-year review Hunter Water will re-assess which assets were delivered, have changed delivery timing or value, and include final asset values in the developer charge model.

Summary of Future Works in the DSP

Table 2 provides a summary of the future Hunter Water funded works within the Morpeth WWTW DSP. Hunter Water's financial, developer and geographic information systems were used to identify works that will be constructed to provide a benefit to future development. Additional details of the items including the costs and the forecast date of works are shown in Appendix A.

DSP Name	Asset Type Total Cost (\$2020-21)*		
S.15 Morpeth	Future Linear Assets	\$	-
	Future Point Assets	\$	68,952,327.97
	Connecting Asset Funding	\$	2,806,000.00
	Future Connecting Asset Funding	\$	8,500,000.00
	TOTAL	\$	80,258,327.97

^{*}Note: only the percentage of the capital program attributable to growth has been added to the developer charge model

Shared Assets across DSPs

Across Hunter Water's wastewater systems, wastewater assets are generally contained within their respective catchments, and as such, within their respective DSP. Shared assets between wastewater catchments are minimal.

In the case where there are assets that are shared between DSPs, each connecting lot that benefits from the asset will pay an equal contribution towards the cost of the asset.

Table 3 provides a list of any wastewater assets which are/will be shared among multiple wastewater DSPs.

Asset Name	DSP that benefit from this asset
Belmont Outfall Sewer	Toronto WWTW DSP
(commissioned asset)	Dora Creek WWTW DSP
	Edgeworth WWTW DSP
	Belmont WWTW DSP
Toronto Effluent	Toronto WWTW DSP
(commissioned asset)	Dora Creek WWTW DSP
	Edgeworth WWTW DSP
Biosolid	Belmont WWTW DSP
(future asset)	Boulder Bay WWTW DSP
	Dora Creek WWTW DSP
	Edgeworth WWTW DSP
	Farley WWTW DSP
	Kurri Kurri WTW DSP
	Morpeth WWTW DSP
	Raymond Terrace WWTW DSP

	Shortland WWTW DSP Kings Hill Wastewater DSP Toronto WWTW DSP
Raymond Terrace WWTW (commissioned asset)	Kings Hill Wastewater DSP Raymond Terrace WWTW DSP

List of shared assets are provided in Appendix A.

CALCULATION AND FINANCIAL INFORMATION

Reduction Amount

Revenues

Future periodic revenues have been forecast using charges in Hunter Water's prevailing price determination. This determination was released in June 2020 with periodic prices set until 30 June 2024. Revenues after this date are kept constant per ET at the 2024 financial year rate.

Table 4 provides a summary of charges and the overall revenues per ET used in calculations.

TABLE 4: PERIODIC CHARGES AND REVENUE PER ET

Revenues per ET			
\$20-21	2022-23	2023-24 +	
Single Residential	817.10 * 0.75	817.10 * 0.75	Base sewer service charge after 75% deemed discharge factor
	120 * 0.68	120 * 0.68	Sewer usage charge x 120kL deemed discharge
	694.43	694.43	Wastewater revenue per ET

Periodic revenues include a fixed and usage component, based on both volumetric demand and the type and size of connections to the system. Due to Hunter Water valuing ETs based on bill size, revenue per ET is the same amongst all customer types. Average discharge of a customer in different customer classes is recognised in the actual value of the ET.

In Table 4, the deemed discharge of an ET is 120kL per year.

Appendix B details the future periodic revenues expected to be received from new customers each financial year.

Operating Costs

Wastewater operating costs includes a treatment cost per ET specific to each wastewater catchment zone, plus a system wide average cost per ET related to operations, transport and miscellaneous.

This method is used because:

- The cost to service most network systems is reasonably similar.
- Operational costs of wastewater treatment plants is dependent on the level of treatment required. This provides a pricing signal for different wastewater catchment zones.

Appendix B details the future expected operating, maintenance and administration costs of providing services to new customers each financial year.

Indexation

All input costs included in the Maximum Price are in Real Terms - \$2020-21.

The Maximum Price in Table 4 is indexed to \$2022-23. The applied index of 1.125 reflects actual inflation for the year to June 2022 of 6.14%, and actual inflation for the year to June 2023 of 6.03%.

The Maximum Price in \$2022-23 will then be adjusted for inflation by the CPI multiplier outlined in Schedule 6 of the 2018 Determination.

In line with the 2018 Determination the following discount rates have been used to calculate present values:

• Hunter Water has applied r₁ of 3.0%.

This converts pre 1996 commissioned assets and ETs for these assets to present values.

• Hunter Water has applied r₂ of 4.2%. This is the pre-tax WACC in the Final Report that accompanies Hunter Water's prevailing periodic price determination.

This converts post 1996 commissioned assets, uncommissioned assets, the reduction amount and ETs related to these, to present values.

Maximum Price

A single wastewater developer charge applies to all customers in the DSP area. This is detailed in Table 5.

Each site will have two developer charges applicable – one for water and another for wastewater. Developers will need to refer to Hunter Water's website to identify which DSPs are applicable to their development.

Morpeth			
S.15			
Calculation Components			
Capital Charges Pre 1996 Assets (\$2020-21)	\$	1,152.59	
Capital Charges Post 1996 Assets (\$2020-21)	\$	6,839.69	
Shared Asset Charges (\$2020-21)	\$	150.46	
Reduction Amount(\$2020-21)	\$	4,856.70	
Developer Charge(\$2020-21)	\$	3,286.03	
Developer Charge(\$2022-23)	\$	3,696.79
