THE STATE OF THE CENTRAL COAST'S POTABLE WATER IS ABSOLUTELY APPALLING! Our tap water either smells strongly of sewer or strongly of chlorine, neither of which is close to being suitable for drinking but rather hazardous to our health. If the council wants to shield itself from a future class action it should remedy this urgently. The stench is due to a high sulfur content which the council is remediating by adding chlorine. While a little sulfur is crucial to good health, we get more than enough in our diet. Too much sulfur can build up in our bodies and become toxic resulting in many chronic health issues. I have recently been diagnosed with a sulfur sensitivity due to this excess. Of course just adding chlorine to the water is the most cost effective way of treating high sulfur levels but are the cost savings worth a decline in the health of the residents, not to mention the extra strain on our health care. Central Coast council has been able to sweep many things under the carpet in the past but NO longer, the residents are sick of being taken for fools. I do NOT believe I should have to pay even a cent more to have basic clean drinking water.
