Submission: An increase of 7.5% per year for 7 years equates to a total increase of 66%. This area has a high number of retirees, either on government pensions or self funded, who's incomes do not increase 7.5% per year. The people living in this area that work have not seen an increase in their wages of this amount for a decade or more. This council needs to rethink their planned spending habits. An increase of this amount will have residents facing financial hardship.
