Submission: Your reference:W21/1533

I wish to add the following to my submission of yesterday (16th February 2021) re the service charge (also referred to as an availability charge).

By referring to my then attached spreadsheet, it can be seen that my supply exceeds my demand, yet I am charged as a consumer rather than a supplier.

Would it not be fairer to review this charge and the way that it is levied?

compare the arrangement with other generators, such as wind farms and solar farms. Although they would be classed as wholesalers they contribute to the grid in the same manner as domestic solar panel owners. Do they pay to generate, or do they receive payment?

Submitted as an addendum to my previous submission.
