I don't understand were you get a 34% price increase on water and sewage from?? The central coast council has already wasted rate payers money which residents have paid and now the Central coast council is in dept \$565M. We are not a open bank account that the council can and just make more withdrawal from rate payers every time they waist money and hit hard working people who try to the right thing by paying their rates only to find out they need to fork out more money. I work hard all year and if I meet my employers KPI's I might get an increase of 2% but the councils just plucks out figures of 34%. How are people supposed to find this kind of money and were does this stop?? The council is been unfair to it's rate payers and needs to understand that we have had a pandemic, people have done it tough. If you plan an increase pricing be fair to your rate payers a 2% to 5% increase maybe starting 2023. We are already going to be slugged 15% for council rates which was lost through bad management. I am a rate payer and I say no to this increase.
