Your submission for this review:

Dear IPART, I think you have failed to consider the ability of the [REDACTED] central coast councils ability to squander money and be like Oliver saying 'please sir, may I have some more' and every time you give it to them. With increases in every single commodity but no increases in wages, how do you anticipate we pay?? I for one am sick and tired of being the scape goat paying for government systemic failures and am disgusted that a so called independent organisation seems to give council every opportunity to stick it to their rate payers (or share holders as we recently were referred as) by constantly allowing meetings and reviews and not making those documents public, as well as allowing council to spend ridiculous amounts of money on consultants to make their submissions.. if they can't make a submission on their own, how are they going to run the services that they are applying for more money to manage.. ??? They won't, it will just get [REDACTED] away like every other dollar that they get their hands on. Please let reason prevail and stop enabling the repeated failures of CCC by giving these excessive rate increases, we honestly would be better off with high school children running things.
