Your submission for this review:

I am expressing my concern over the proposed price increases for a number of reasons. Firstly the increase is not in line with the return we receive on our commodities. There is no way we can absorb this kind of price increase when the price we receive for our commodities is not rising. I understand that you may need to increase prices but at this rate I am confused. What is this money used for? Why have I not been contacted by NSW water to notify me of why these price increases are occurring. Has NSW water taken into account the potential impact to farming and farming communities. There seems to be a distinct lack of communication and transparency. The proposed price increases are completely unreasonable.
