Your submission for this review:

Dear IPART team Our air quality is being damaged by the emissions from private vehicles which clog our roads. We should be encouraging more people to use public transport - by making it FREE or at least capped to a minimum 50c as in QLD. I am strongly opposed to any increase to Opal fares, which adds to the cost of living. Public transport is a right - not a privilege - and passengers should not pay the price for getting off the roads, the increase should be borne by the private road users instead. Thank you.
