I'm glad someone is looking into virtual power plants. I've recently bought a battery with the rebate from the Commonwealth Government, and I want to join a virtual power plant to get the rebate for this. Without this second rebate, it will take quite a lot longer to payback my battery. I have researched online for virtual power plants, but it's very hard to find any useful information. A lot of the information that you seem to need is buried in the virtual power plant contracts and some of the information is very concerning. Some of the virtual power plants make you discharge to very low levels when the retailer wants too which can degrade your battery life, others can charge your battery using energy from the grid when the capacity is too low which is not a good use of solar, and others will cycle your battery daily. I like Energy Made Easy and use it for my electricity, but there are no virtual power plants that I can find on there. I bought a battery and want to join a virtual power plant that pays me a fair amount. But I also want to know that the virtual power plant won't take my energy when I need it most like when there are emergency events or blackouts. Please look into this issue in your report.
