Hi, the price increase proposals are shocking and completely unjustified. Firstly, as water is a limited resource, any increase should only apply to the usage rate to encourage conservation measures. Instead, we have a shocking increase that will make in a massive fixed cost. Secondly, it should be user pays for additional capital works, not slug everyone. Or wastewater treatment is an international embarrassment. Almost every other developed country major city in the world has more advanced water treatment eg tertiary or quaternary which is also the level we rightly demand of major industrial users. Sydney water pays a dividend to the state government. Sydney water should be run for the population and reinvest their profit into the water business instead of increasing fixed charges. Please, do not increase fixed charges. Please reinvest the dividends. Please introduce more user pays for extra infrastructure.
