CCC has a history of inefficiency, and [REDACTED] this inefficiency. Now you ask the public to pay for this inefficiency. How is a pensioner supposed to pay for a 19% increase in water and a 15% increase in rates with increases to follow in the future? Absolutely everything is going up in price, from fuel to food, with this alone leading a modest life is difficult, and now you want to make it near neigh impossible. Why wasn't there a body checking the councils balance sheet when it's debt was going through the roof? Now, like always it's up to the constituents, who had no part to play in this deceit, to pay for the mess that government has made. Raise the pension/wages by the same amount and I might consider this rate and water rise as fair.
