Our water usage is very less but we pay a huge water bill. Why? Because the administration fee the council fees this recycle water fees. There's lots of fees and admin fees that are added on top of the usage. I know it is fair to charge some fees for administration for supply etc. But if it exceeds the usage then what is the point? Because I'm not able to afford the water bill? I consume less and less every day but I still end up paying about \$500 per quarter towards my water bill and this I am unable to afford. Water should be something that is given freely or at a minimal cost. It is not like electricity. I know water is precious. But we've had lots of rains and flooding and the Warragamba dam is overflowing so what is the issue here? I don't understand. The admin charges and all the usage charges are added should be proportionate to the usage or it should be lesser than the usage. Only then I will be able to afford the bills otherwise it is an unnecessary pressure. Question to the government is do you want us to consume water and stay healthy or not? Consume water at all fearing the big bill?? I firmly condone any increase in prices towards the water bill because as it is it is not affordable by the middle class people let alone the lower and come ones. Please **DO NOT INCREASE ANY FEES OR ADMINISTRATION FEES OR SUPPLY FEES ETC. ETC THAT ARE BEING INCREASED EVERY YEAR.**
