Submission: MSP's are losing requests from independent meter installers (ASP's).
It is impossible to attend to meter an installation on a date proposed by an MSP, these works are not an outage, they are discussed with a Customer who has requested the works one on one.
MSP's do not understand the stage a project may be at, therefore have no idea when the metering is required.
MSP's have decided to reinvent the wheel when it comes to Metering, I only have 20 years experience doing metering and have had to relearn how to do it?
The care factor of the government and how many jobs/businesses this has cost is zero, timeframes that people take to issue a response from is appalling.
The whole system needs another reset with some semblance of credibility attached to it.
See attached document for further indications and the amounts of monies being wasted away.
Feel free to contact me.
