SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

6:57:35 PM

Feed-in tariffs are presently much too low and do not reflect the financial risk and capital costs of the individuals who have installed solar systems. I believe rooftop solar systems being activated effectively reduce the infrastructure costs of the electricity retailers as the power is consumed close to the generation source. This is not reflected in the paltry sum offered by retailers to the individuals who have taken it upon themselves to help reduce the burden on the large generators and also the burden on the planet.
