**SOLAR FEED-IN TARIFFS 2017/18**

**Tuesday, 9 May 2017**

5:02:08 PM

I believe that the fairest price for a solar feed-in tariff is parity with the price charged by fossil-fuel based power generators, less the cost of transmission infrastructure.

Why should one unit of power be less than the same unit sold by commercial power suppliers?

Domestic solar installations are helping to reduce the need for investment in large power stations, helping to reduce greenhouse emissions, and helping to ensure a skilled workforce of installers.

I have a domestic PV solar installation, but the tariff paid for any excess power that I feed into the grid is pathetic.

I therefore strongly urge IPART to recommend a minimum feed-in tariff of at least 14.6c per kWh.
