

SUBMISSION TO IPART REVIEW
SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017
11:24:52 AM

It makes complete sense to insentivise consumers to invest in renewable energy because this decreases the cost that the state has to bear. The current feed in tariffs don't recognise many of the positive externalities associated with solar including improved health, reduced future suffering, a vital and thriving environment and a safer more co-operative world.
