**SOLAR FEED-IN TARIFFS 2017/18**

**Wednesday, 10 May 2017**  
10:20:55 AM

The Independent Pricing and Regulatory Tribunal (IPART) has proposed to more than double the NSW solar feed-in tariff benchmark to 11.6-14.6c per kWh in line with the increased wholesale price of electricity !!!

This is great news even though its nowhere near the 60 c per kWh.

The 6c is an insult to the public who actually care and want to make a difference to our brave new world of limited recourse's and a world which on top of this has to deal with the pollution & fall out from the continued use of coal and other non sustainable power sources!

We need to act quickly as our world is changing much faster than predicted with climate change & that's only what we are being told by the few smart believers!!!

We are experiencing as predicted much more extreme weather events. So Please help people to afford power by giving more back in regards to the feed in tariff & the rebate.â€¢The feed-in tariff should represent the true value of solar, this means recognizing the environmental and health benefits and the network benefits of rooftop solar.

Yes the feed-in tariff should increase in line with the wholesale price of electricity it should not just be a benchmark range, it should be regulated so retailers have to offer it as a minimum.
