SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

2:25:14 PM

I you support a fair price for solar - it is clean, sustainable energy!

The feed-in tariff should increase in line with the wholesale price of electricity.
That is only fair.

The feed-in tariff should not just be a benchmark range, it should be regulated so
retailers have to offer it as a minimum.

The feed-in tariff should represent the true value of solar, this means recognising
the environmental and health benefits and the network benefits of rooftop solar.

We love having solar to (mostly) power our needs and evacuated tubes to heat
our hot water. I hate having to pay electricity companies that generate power
from coal for electricity. It is harmful to our environment and it is not an infinite
resource. We need to change our thinking and usage in this regard. We are a
country that could run on 100% renewables.

Why don't we?
