

SUBMISSION TO IPART REVIEW
SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

12:47:40 PM

I support that IPART recommends that a fair price be paid for roof top solar by NSW residents.

I support that IPART recommends that the feed-in tariff should increase in line with the wholesale price of electricity.

I support that IPART recommends that the feed-in tariff should not just be a benchmark range, it should be regulated so retailers have to offer it as a minimum.

I support that IPART recommends that the feed-in tariff should represent the true value of solar, this means recognising the environmental and health benefits and the network benefits of rooftop solar.

I have had my roof top solar installation since the Rudd Labor Government introduced it. Since then I have felt rewarded that I am contributing to the bigger picture of Solar Generation in Australia. I am an Electrician and I knew the benefits that would be associated with the Solar systems being installed at my house. It was also in revolt to the generating companies and the electrical retailers robbing the residents of NSW and Australia blind to the increased prices of electricity. There is no shortage of generation and as well the constant blame game that is going on is all lies, including all forms of Governments. The outright usage of electricity has dropped and so has the big bonuses that all were use to receiving in their remunerations and payouts to all involved in all the lies that we are going to run out of electricity. SCARE TACTICS to manipulate the general populations into fear!

So if IPART can see the benefits of increase our generation prices then it should be mandatory that these savings be passed onto the generators this time - the NSW residents!!!
