**SOLAR FEED-IN TARIFFS 2017/18**

**Wednesday, 10 May 2017**  
6:30:54 AM

Hello, We put solar panels on our home two years ago, so have never enjoyed a high tariff. Despite being careful to run appliances when the sun is out, we only save 10% on our bill each month. At this stage it'll take 20 years for our panel installation to make sense financially. We'd be grateful for a higher, fairer feed in tariff that more closely represents the contribution we are making to even out high load times. In the bigger picture, we'd love a higher FIT because it'll encourage others to add solar - and this is all part of reducing pressure on the world's non-renewable resources.
