

**SUBMISSION TO IPART REVIEW**  
**SOLAR FEED-IN TARIFFS 2017/18**

**Wednesday, 10 May 2017**

7:04:12 AM

I am a concerned stand alone solar consumer who if there was a viable alternative for connecting to a state or national grid to share my excess solar supply from my batteries the I would connect to the grid, I use solar power because I sense an environmental catastrophe looming in the not to distant future if we don't act now to cancel our use of fossil fuels.(read old energy) I implore in my submission that this committee throughly endorses the use of renewable energy (read new energy) and the adoption legislatively that new energy be the main sores of power generation into the coming millennium, to enhance this there needs to be remuneration compareadle to the kilowatt hour of power produced to the community/family who individually /collectively catch and store and then redistridute that electricity for others to consume, the time for new energy has dawned, the time now is to act, and to act in the interest of our environment and planet.
