Submission: "The solar tariff should represent the true value of solar Not only do we help keep prices lower for all electricity uses in NSW , we help keep a cleaner environment and keep emissions lower

Why do other states get much better prices for their solar electricity ? It's not fair

The FIT needs to be mandated and regulated so that all retailers have to offer it as a minimum

Help us keep our solar Help Australia be a world leader in solar  
Do not drop solar prices"
