Submission: "We retired and my wish has always been to support our environment and help our country head towards zero carbon emissions. We spent significant money putting up solar panels and hoped to get a FAIR PRICE on our money. But no, our country has gone backwards and the feed in tariff supports our lack of any commitment to improve any environmental outcomes. No wonder electricity prices are on the increase. The oxymoron clean coal is still being touted as our saviour!!!! Why do we have politicians other than to line their own pockets?
We need to support as many environmental projects for our future and our grandchildren."
