**SOLAR FEED-IN TARIFFS 2017/18**

**Friday, 19 May 2017**  
11:39:58 AM

Its a rough to see the electricity companies paying so little for the solar we generate. We have paid to set it up and they are getting the energy for next to nothing and then charging it back to us at 5 x price. This needs to change and must support and provide incentive for individual house holds to invest in new solar systems to grow as a means to cover the majority base load required for electricity net work.

Increase the export tariff rate for solar powered home owners and see the benefits to all.
