SOLAR FEED-IN TARIFFS 2017/18

Monday, 22 May 2017

6:10:52 AM

I am planning to fit solar panels to my house, but use more power at night than during the day. I understand that part of the retail cost of power is the cost of the transmission infrastructure, which can reasonably be covered by a standing charge, but above that the price I am paid for supplying power to the network should be related to the price I pay to buy power.

For this reason I call on you to set a mandatory, reasonable feed-in tariff.
