SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

11:44:04 AM

This year I plan to install an 8-10kW solar system. If the feed-in tariff is set at a minimum of 14.6c/kWh and regulated, I will connect it to the grid, otherwise I will also install 2x10kWh Redflow batteries and a 4kW diesel generator and disconnect from the grid altogether. Because I live in a flood-prone area and have many black-outs during a year, the second option is also very attractive.
