Submission: As an individual who has paid for infrastructure and then feeds the grid I should be paid a reasonable FIT. This is no different if I were a business like an energy company. As an energy company I would want a proper return on capital invested in infrastructure that produces energy. Currently the return for individuals is inadequate compared to cost of installing. Individuals should fairly compensated as they are helping NSW with energy production and reducing infrastructure costs for energy companies. Individuals should be enticed to invest. Investing is great for NSW economy while assisting with the future energy requirements that NSW face.
