Submission: I would like to offer my support for a 14.6c per kWh feed in tariff for solar generated by grid connect domestic solar plants. The supply rate from the main generators has risen considerably, and without reasonable grounds to do so. Homeowners installing grid connect solar PV systems provide additional support to the grid, therefore should be reimbursed at a rate closer to the sell price of the big power companies. Lastly, the only reason the FIT is so low is because the government wants to look after its power mates. However since we sold it all there is no benefit to the homeowner to allow these people to monopolise the power grid.
