Submission: The quality of our water is poor...

It is not drinkable, regardless of what the water testing indicates.... (yes, have had mine tested).

Since moving out South in 2015, I have not drank the tap water. Until a fortnight ago, I was still using tap water for coffees. I have since started using the bottled water to make coffees and am amazed with the difference. I can actually taste the coffee.

Showering with the tap water leaves the skin dry and itching....and hair, flat and brittle...

When doing laundry, clothes no longer smell fresh and clean when hanging out to dry....fabric softener is needed to have the clothes smelling fresh, where once laundry detergent was adequate.

I am against any price rise regarding the water/
