Submission: The beaches estate has already ruined the beautiful area by ruining all the bush land and making dramatic changes to the environment. And now this?! There is no way that building a treatment plant will benefit the surround beaches and sea life. Not to mention, the locals who live locally and people who visit the area for its beautiful beaches. There has already been enough pollution going into our waters from the development of this estate. Us, the environment and the sea life don't need any more damage - Especially from money hungry rich folks.
