Submission: The scheme, has been implemented at a time , when Australians consumption of cool beverages are at the peek. (Christmas and Sumer). As a provider of a service to ensure that machines are functioning, such as cleaning twice daily, being on call 7 days a week. And yet the machines struggled. From always being full, to plastic mouldings of machines letting go in extreme heat . The fact that local recycling centres weren't involved impacted on our rural community greatly . From rubbish piling up at sites and blowing over the town, constant complaints from the community for having to travel 70 + kms to arrive to full machines for the 5th or 6th time . Provision of other bins and reciprocals for other recycling products would cut down on the extra landfill being produced.
