Submission: I oppose this application for a variation to Solos operating conditions. This is a blatant disregard for the local environment/residents. This is a typical action from a developer/ large company, penny pinching by opting for the cheapest option instead of, a)connecting to a sewer network from the get go & b) transporting the waste to a treatment facility. I have been and still am, a regular visitor to the area and would hate to see the area degraded by this proposal (Although it has already been degraded by the whole development). Has the company provided any scientific evidence that this variation will have zero affect on the environment? If this variation was to be passed, I would have to say I would stop visiting the area altogether.
