**SOLAR FEED-IN TARIFFS 2017/18**

**Monday, 22 May 2017**

10:45:55 AM

It is very important to me, as a home-owner who has invested in solar infrastructure, that we see our investment reflected in the feed-in tariff for excess power we generate. It is important to me as a citizen that solar investment isn't stymied by this clear attempt by vested interests to force up the cost of the investment. Artificially high feed-in tariffs are anti-competitive and should be stopped for that reason alone.
