SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

2:20:42 PM

I absolutely support a fairer price for solar feed in tariffs. I believe the tariff should increase in line with the wholesale price of electricity and rise as the demand for electricity increases, as with the wholesale price. The feed in tariff should be regulated so retailers have to offer it. The price should recognise the true value in Solar energy. As the use of solar increases around the country the energy retailers are only going to receive more and more feed in from solar customers and receive the overall benefit. Solar customers who provide energy to the market should be rewarded with realistic prices.
