SOLAR FEED-IN TARIFFS 2017/18

Tuesday, 9 May 2017
6:31:16 PM

I agree with increases in the solar feed-in tariff. I feel that while it may not be competitively useful for it to be the exact cost of electricity, it should be comparable as to designate the value of investment made by those who purchase solar systems and feed into the grid. Electricity from their installed panels (or other alternative energy devices) should receive proper value as it would increase incentives for further generation and thus the power company could become more of a resource allocation machine than general generation. The benefits in the long term are obvious as it would move away us away from rampant consumption and possibly effect living patterns to use less and be more aware of what precisely our personal electricity consumption is. Thank you for your time.
