

SUBMISSION TO IPART REVIEW
SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017
11:35:52 AM

It is simply unreasonable for electricity supply companies to pay so little for power generated by domestic solar panels. I support a fair and fixed price for solar electricity that is revised in line with the cost of retail units of non-solar power. Apart from the environmental benefits of solar, it is important to recognise that most owners of solar panels are still consumers of coal fired power. Under the new proposal the price gap between the cost of these two is simply too large, is blatantly unfair and is a donation to the coffers of the big power supply companies..
