SOLAR FEED-IN TARIFFS 2017/18

Tuesday, 9 May 2017

5:21:47 PM

Roof top Solar is saving the NSW government millions of dollars, and making money for the energy providers. Customers receive less than 5% of the true value for sale he feed in tariff and it isn't even compulsory! That does not even take into account the cost to o build new power stations! The customers bear most of us he cost of installation and receive a fraction of the value of electricity fed into the grid at PEAK load. Then they are charged full price for what they use when the sun goes down (off peak) time. All we want is a fair deal! A compulsory minimum feed in tariff of 20c would be fair, and still below the cost at PEAK time. The alternative of going off the grid and battery storage is becoming price competitive. What happens to all that cheep power then! It is not in the grid.
