

SUBMISSION TO IPART REVIEW
SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

2:02:44 PM

I believe the NSW solar feed in tariff should be dramatically increased, as every panel adds up and in turn that reduces the load on the generating system, also it is a non polluting way to generate electricity.

With the large McMansion type air conditioned houses and industry and all other uses, the load is growing and I believe the existing generator would not be able to cope with the load without the large number of houses with solar panels.
