SOLAR FEED-IN TARIFFS 2017/18

Tuesday, 9 May 2017

11:26:43 AM

I believe it is now time for both State & Federal intervention in the feed in tariff racket. Home producers of solar energy in excess of their own requirements are not being paid a fair rate for the power they feed back into the grid. It is clear that both State & Federal Govts have either ignored the situation and/or spent time playing politics with the situation. Both are reprehensible and need immediate attention. Like it or not the home electricity producer plays a significant role in the overall picture.

a) legislate to oblige energy providers to pay a fair & reasonable feed in tariff.

b) As a matter of urgency install battery back up storage.

There is a wealth of good information available. Most of it has been available for some time.

c) The power providers are against this as their livelihoods are at stake! The situation cannot be left such that they can hold the country to ransom.

d) No more sell offs as this sets the scenario for greed to replace the common sense necessary to solve the problem.

e) Buy back the farm and once again treat power as a utility.
