**SOLAR FEED-IN TARIFFS 2017/18**

I strongly feel that Solar generated power should be valued at the current Electricity price - on a 1 for 1 basis. Pretty easy, I bought my system and if i'm giving the 'grid' my unused power, i should get that back in return, ie 'credit'. I'm still going to have to buy some grid electricity. It really shows that this is a money venture exercise by the big producers. Solar generated power is the future in using 'less fossil fuels' for electricity generation. I'm sure that can't be a bad thing for the enviroment. I was previously on the 20c kW credit return and even then I was paying more for electricity why buying on the 'gross' system. Even still, I was happy with what I was receiving, but to reduce it to the levels I'm currently receiving, well that's ridiculous. I'm not making money out of that 'gross' setup. Solar generated power should be fairly structured so the home owner can be given a fairer go on their power feed into the 'grid'.
