SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

2:30:18 PM

I agree that there should be a fairer feed-in tariff for everyone.

At the moment I get 6 cents for each kwh I feed into the Grid. As AGL have been slow to upgrade my meter from a gross to a net meter, I then buy back that electricity for approx 25-25 cents per kwh. So they are making a good profit out of me and many others still waiting for the meter change. This is very annoying.

The power companies shouldn't be making large profits out of their customers. We are after all supplying them with green energy that they sell on. So a fair feed-in tariff is a must.
