SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

1:37:59 PM

In the interests of a fair go for households with solar, the feed-in-tariff should be mandatory not just a guide.

In addition, peer-to-peer trading of electricity should also be allowed (whereby a property with solar can trade their excess to neighbours or nearby properties). This should attract a higher price than wholesale electricity prices because it is only being transported a short distance and therefore doesn't use the entire transmission and distribution system from a centralised power plant to the point of consumption.

Thank you for your consideration.

Yours Sincerely,

Cameron Dalglish
