Submission: I have a 3 KW PV system, and I speak from experience. Households and businesses need a realistic feed in Tariff otherwise installing a solar system is uneconomic. Australia is already failing to meet our carbon targets under the Paris agreement, we need to encourage more households and businesses to install solar (and batteries) to help smooth peak demand and meet our carbon targets. It is unconscionable for electricity suppliers to pay almost nothing (or indeed nothing at all) the feed in tariff must be legally mandated.
