SOLAR FEED-IN TARIFFS 2017/18

Tuesday, 9 May 2017
10:50:27 AM

The solar feed-in tariff benchmark that has been proposed is not only a good suggestion - it should be a mandatory obligation for every electricity company. This is price gouging of the highest order....to be paid 6 c/kwh for electricity that is unsold for (at least) 4 TIMES that amount for ZERO cost to the reseller is plain extortion there is no kind way to put it. The feed-in tariff proposed currently at between 11.6 to 14.6c/kwh should further increase in line with the wholesale price of electricity. Additionally recognition should be given to the positive consequence from an environmental standpoint that households which have Solar Electricity make....as such the recommended tariff is really only a starting point. Your positive engagement is now required for tying essentially loose dogs to a stake....enough gouging!
