SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

4:55:10 PM

As a concerned member of the community I not only have paid a substantial price for my solar panels but also had to pay for a new roof as well so the panels could be installed....The more people who have solar on the roof tops the better the outcome for the future generations of Australians and the world. The better return we have for the power we produce and feed back into the system...at the moment...the more roof top solar systems will be installed. The feed-in Tariff needs to be aligned with the raising price in electricity and I urge you to consider a reasonable minimum Tarif. As soon as I am able to purchased a reasonably priced battery system I shall be doing so as will many other solar panel owners. Then there won't be the need for a feed-in Tariff.

Chris Hurditch
