SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

5:19:12 PM

Dear IPART

I have installed solar panels on my house at significant personal cost despite the former feed in tariff.

Solar is clean and renewable, unlike polluting fossil fuels such as coal and gas.

At the very least I should receive equal payment for what I feed in to the grid. It is not fair to be paying up to 50cents per kWh and be paid less than the off peak charge of 11cents per kWh.

What I use, when I use it and what I feed in, when I feed should at the very least be equal.

It would be far better to offer more money for clean energy fed in by solar panels or other renewable sources of energy and penalise those who are contributing to climate change.

Yours faithfully

Caroline Kades
