SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

5:51:03 PM

To whom it may concern,

As a solar supporter, I'd like to have a voice in the suggestion that the NSW solar feed-in tariff be changed.

For me, this is about representing the real value of solar power, recognising the environmental and health benefits and also the network benefits of rooftop solar. Australia should be a leader in this move away from traditional power sources for the well being of the global community.

The feed-in tariff should be regulated so that retailers can offer it as a minimum - not just a benchmark range. It should also reflect the significant investment individuals have made towards clean energy and Australia's future and therefore, it needs to return a fair price . Following this line, it should also increase with the wholesale price of electricity across the board.

Please take these concerns seriously. This is Australia's reputaion globally - we should not be outshone by European nations in this field. It's embarrassing.

Yours sincerely,

Catherine Lane
